

Business Requirements

The E-Commerce Order Management Database System shall fulfill the following business requirements to ensure efficient management of online shopping operations:

BR-01 Customer Management

- The system shall allow customers to register using their personal details.
 - The system shall maintain customer information, including name, email, mobile number, address, and registration date.
 - Each customer shall have a unique Customer ID.
-

BR-02 Product Management

- The system shall maintain a catalog of products with pricing and stock information.
 - Each product shall belong to a specific category.
 - The system shall allow administrators to update product details and stock quantities.
-

BR-03 Category Management

- The system shall organize products into predefined categories.
 - Each category shall have a unique Category ID, category name, and description.
-

BR-04 Supplier Management

- The system shall maintain supplier information, including supplier name and contact details.
 - The system shall support the management of product suppliers.
-

BR-05 Order Management

- Customers shall be able to place orders for one or more products.
- The system shall generate a unique Order ID for every order.
- The system shall maintain the order date, order status, and total amount.

BR-06 Order Details Management

- The system shall store detailed information about each product included in an order.
- The system shall record product quantity and unit price for every order item.

BR-07 Payment Management

- The system shall record payment information for every order.
- The system shall support multiple payment methods.
- The system shall maintain payment status and payment date.

BR-08 Shipment Management

- The system shall track shipment information for each order.
- The system shall record delivery address, shipment date, and delivery status.
- Customers shall be able to monitor the delivery progress of their orders.

BR-09 Customer Review Management

- Registered customers shall be able to submit ratings and reviews for purchased products.
- The system shall store customer ratings and comments.
- Reviews shall help improve product quality and customer satisfaction.

BR-10 Reporting and Data Management

- The system shall generate reports related to customers, products, orders, payments, shipments, and reviews.
- The database shall maintain accurate and consistent information while reducing data redundancy.
- The system shall support efficient retrieval of business information for management decisions.

Overall Business Requirements

The proposed E-Commerce Order Management Database System should:

- Centralize all business data in a single database.
- Improve operational efficiency.
- Reduce manual work and paperwork.
- Eliminate duplicate data.
- Ensure data accuracy and consistency.
- Provide secure storage of customer and payment information.
- Improve customer satisfaction through efficient order processing.
- Support business growth with scalable database architecture.
- Generate accurate reports for business analysis and decision-making.
